

Continental 
The Future in Motion

When Everything Counts

PremiumContact® 6

The next instalment in the ever successful PremiumContact family, where comfort is so much more than just a driving characteristic:

- Comfort with safety thanks to improved wet braking performance.
- Comfort with stability and control thanks to improved handling.
- Comfort with value thanks to lower fuel consumption and improved mileage.

PremiumContact® 6

A truly premium experience.

Technical highlights.

Maximum wet braking while improving mileage due to Safety Silica Compounds

The crystal silica composition in the cap and base compounds enables superior braking performance especially in terms of wet road conditions. While keeping the safety performance at the maximum level, the mileage improved significantly – a solved conflict in tyre development.

Extended driving convenience upgraded by the comfort-optimised performance footprint

The wear-optimised polymer blend provides an outstanding improvement of more than 15% in mileage performance. The new polymers have enhanced the contact surface and durability of the tread under daily driving conditions for each vehicle segment. In addition, the smooth pattern stiffness improves driving comfort and mileage, and lowers the interior noise.

Sporty driving in every car thanks to handling-optimised pattern design

The advanced macro-block design ensures maximum control and cornering stability. This complex shoulder block structure enables ultimate lateral force transmission. Furthermore, the asymmetric rib geometry provides higher pattern stiffness and reduced block deformation for a better grip under the effect of lateral forces.
